

Dynamic Blog Post Generation

Your blog now automatically loads posts from markdown files in the `blog-details/` directory.

What's Working

- Blog post cards and detail pages are automatically generated from markdown files
- Markdown content is properly rendered with syntax highlighting
- Three blog posts are already set up and working:
 - `industrial-iot-sensor-intelligence.md`
 - `multi-agent-llm-industrial-optimization.md`
 - `genetic-algorithm-fuel-blending.md`

Adding New Blog Posts

To add a new blog post:

1. Create a `.md` file in the `blog-details/` directory
2. Add YAML frontmatter at the top:

```
---
id: my-blog-post-slug
title: "My Blog Post Title"
excerpt: "A brief description of the blog post"
category: technical
tags:
  - Tag 1
  - Tag 2
  - Tag 3
publishedDate: 2024-01-15
featured: true
status: published
readTime: 10
---
```

`# My Blog Post Title`

Your content here...

Frontmatter Fields:

- **id:** URL-friendly slug (required)
- **title:** Post title - use quotes if it contains colons (required)
- **excerpt:** Short description - use quotes (required)
- **category:** technical | career | insights | tutorial (required)
- **tags:** Array of tags (required)

- **publishedDate:** YYYY-MM-DD format (required)
- **featured:** true | false (optional, default: false)
- **status:** published | draft (optional, default: published)
- **readTime:** Estimated read time in minutes (optional)

Important Notes:

1. **Always quote titles and excerpts** that contain special characters (colons, asterisks, etc.)
2. **Use consistent indentation** in YAML (2 spaces for nested items)
3. Only files with **status: published** will appear on the blog
4. Featured posts can be highlighted on the homepage

Existing Blog Posts Without Frontmatter

Some files in **blog-details/** don't have frontmatter yet. These will be skipped and errors logged to the console. You can either:

1. Add frontmatter to them using the format above
2. Delete or move them if they're not needed
3. Leave them - they won't break the site, just won't appear on the blog

Markdown Features Supported

- Headers (H1-H6)
- Lists (ordered and unordered)
- Code blocks with syntax highlighting
- Tables
- Blockquotes
- Links and images
- Bold, italic, strikethrough
- Horizontal rules

Development

`npm run dev`

Visit <http://localhost:3000/blog> to see your blog posts!

File Structure

```
/steikould.github.io
  app/
    blog/
      page.tsx          # Blog list page
      [id]/
```

```

        page.tsx      # Individual blog post page
components/
  blog/
    BlogCard.tsx      # Blog card component
    MarkdownRenderer.tsx # Markdown content renderer
lib/
  blog.ts             # Blog post utilities
  markdown.ts         # Markdown parser
blog-details/         # Your blog markdown files
  industrial-iot-sensor-intelligence.md
  multi-agent-llm-industrial-optimization.md
  genetic-algorithm-fuel-blending.md
  your-new-post.md

```

Troubleshooting

If a blog post doesn't appear:

1. Check that the frontmatter is valid YAML
2. Ensure `status: published` is set
3. Check the console for parsing errors
4. Verify the file is in the `blog-details/` directory
5. Make sure titles/excerpts are quoted if they contain special characters

The system will gracefully skip files with errors and continue loading other posts.
